THE CAMPUS LEARNING NETWORK

SPACE

PROBLEM

01

HIDDEN SKILLS

Every campus is full of students who know things others want to learn. But there's no easy way to discover who has the right skill.

02

ISOLATED LEARNING

Students exploring projects, skills, and interests outside the curriculum struggle to find peers.

03

BURIED REQUESTS

Students ask for help or teammates in WhatsApp groups and other scattered spaces. Most requests disappear before they reach the right person.

04

FRAGMENTED PLATFORMS

LinkedIn is built for professional networking, Discord communities are fragmented, and college notice boards have limited reach. None are designed around verified, campus-level learning connections.

05

MISSED CONNECTIONS

The person who can teach you—or build with you—may be just a few buildings away. The problem is simply that you don't know how to find each other.

THE SOLUTION

ONE CAMPUS NETWORK

A dedicated space where students can discover what their peers know and what they want to learn.
Everything stays within a verified college community.

VERIFIED STUDENTS

Students sign up using their college email and become part of their institution's verified network.
No outsiders, no fake profiles — just real students from the same campus.

SKILL DISCOVERY

Search for any skill and instantly find students on your campus who have it. Instead of asking “Who can help me?”, you can directly find them.

DIRECT CONNECTION

Message students directly and decide how you want to learn — on campus or online.
No complicated matching, no formal requests, just students connecting with students.

LEARN TOGETHER

Turn a missed connection into a learning session, project collaboration, or new peer relationship.

VERIFY

College email-based student verification.

CREATE

Student profile with skills I know + skills I want to learn.

DISCOVER

Campus feed + skill-based student search.

CONNECT

Direct messaging between verified students.

COLLABORATE

Teammate requests and basic learning-session coordination.

HOW IT WORKS?

FIND → CONNECT → LEARN

IMPLEMENTATION

PHASE 1 — FOUNDATION

We start by building the foundation — student email verification, skill profile creation, and the database schema.

PHASE 3 — CONNECTION

With discovery in place, we build the real-time messaging layer using Socket.io so matched students can talk instantly inside the app.

PHASE 2 — DISCOVERY

Once identity and profiles are solid, we layer in skill search and a campus-wide browse directory so students can actually find each other.

PHASE 4 — DEPLOY & TEST

Final phase is the campus dashboard, UI polish across all screens, and a clean deploy to Vercel and Railway — ready for demo day.

TECH STACK

FRONTEND:

React + Vite
Tailwind CSS
Fast, responsive, component-based UI.

BACKEND:

Node.js + Express
Handles APIs, application logic, and server-side operations.

DATABASE:

Supabase + PostgreSQL
Stores student profiles, skills, posts, and platform data.

AUTHENTICATION:

Supabase Auth
Student email verification for college-exclusive access.

REAL-TIME:

Supabase Realtime
Enables real-time messaging and live updates.

DEPLOYMENT:

Vercel + Render
Frontend and backend deployment for the MVP.

MARKET OPPORTUNITY

100M+

**COLLEGE STUDENTS
ACROSS THE US &
INDIA WITH NO
STRUCTURED WAY TO
FIND PEER EXPERTISE**

Existing platforms (Coursera, Udemy) are built for passive consumption. No platform is built for student-to-student knowledge exchange that market is completely open.

CAMPUS AS INFRASTRUCTURE

Every college is already a dense network of skills, domains, and ambition. PeerSpace doesn't need to build the community it activates the one that already exists.

THANK YOU

SO MUCH!
